Global food challenges

1. Secure food supply for a growing population
2. Improve nutrition and public health
3. Decrease impacts and resources use from food production

SE

The Nutrition Transition will lead to

England

Mali

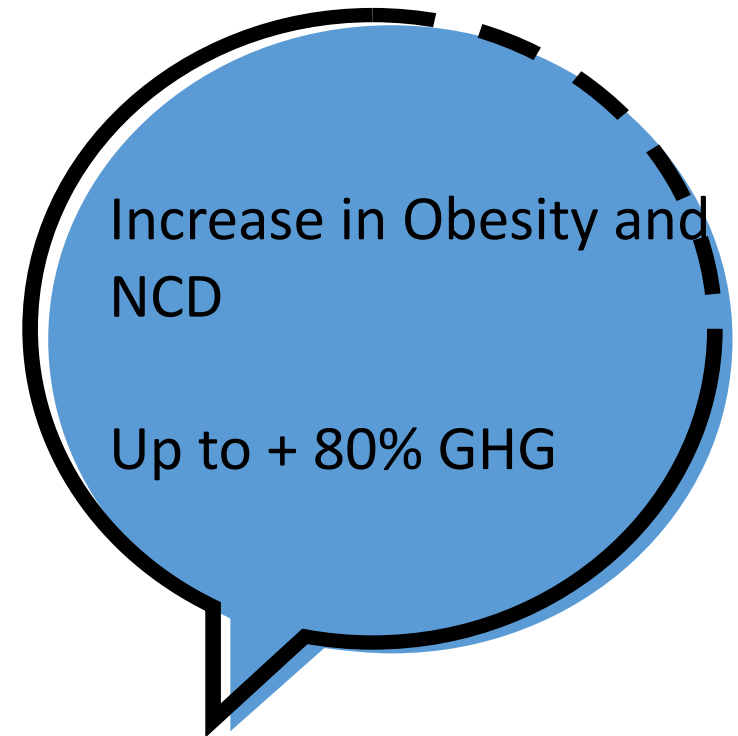

<http://thoughtcatalog.com/madison-moore/2013/05/15-photos-of-a-week-of-groceries-from-different-countries-around-the-world/>

..less balanced and less environmentally sustainable diets in 2050

Total Calories
Total and Animal Protein
Meat and Fish
Sweets and snacks

Increase in Obesity and NCD

Up to + 80% GHG

Planetary Healthy Diet

“A flexitarian diet, which is largely plant-based but can optionally include modest amounts of fish, meat and dairy foods.”

EAT-Lancet Commission, 2019

	Macronutrient intake grams per day (possible range)
 Whole grains Rice, wheat, corn and other	232
 Tubers or starchy vegetables Potatoes and cassava	50 (0-100)
 Vegetables All vegetables	300 (200-600)
 Fruits All fruits	200 (100-300)
 Dairy foods Whole milk or equivalents	250 (0-500)
Protein sources	
 Beef, lamb and pork	14 (0-28)
 Chicken and other poultry	29 (0-58)
 Eggs	13 (0-25)
 Fish	28 (0-100)
 Legumes	75 (0-100)
 Nuts	50 (0-75)
Added fats	
 Unsaturated oils	40 (20-80)
 Saturated oils	11.8 (0-11.8)
Added sugars	
 All sugars	31 (0-31)

Only East Asia
Pacific eats fish
according to the
Planetary Diet

A close-up photograph of several bright green microgreens with small, rounded leaves and thin stems, growing against a light background. The focus is sharp on the central plant, with others in the foreground and background slightly blurred.

NEXUS
Environment Food and
Health Nexus

Nexus Project - FACTS

- Formas
- 10 MSEK
- 2016 – 2021
- KI and Livsmedelverket
- Leader Alicja Wolk

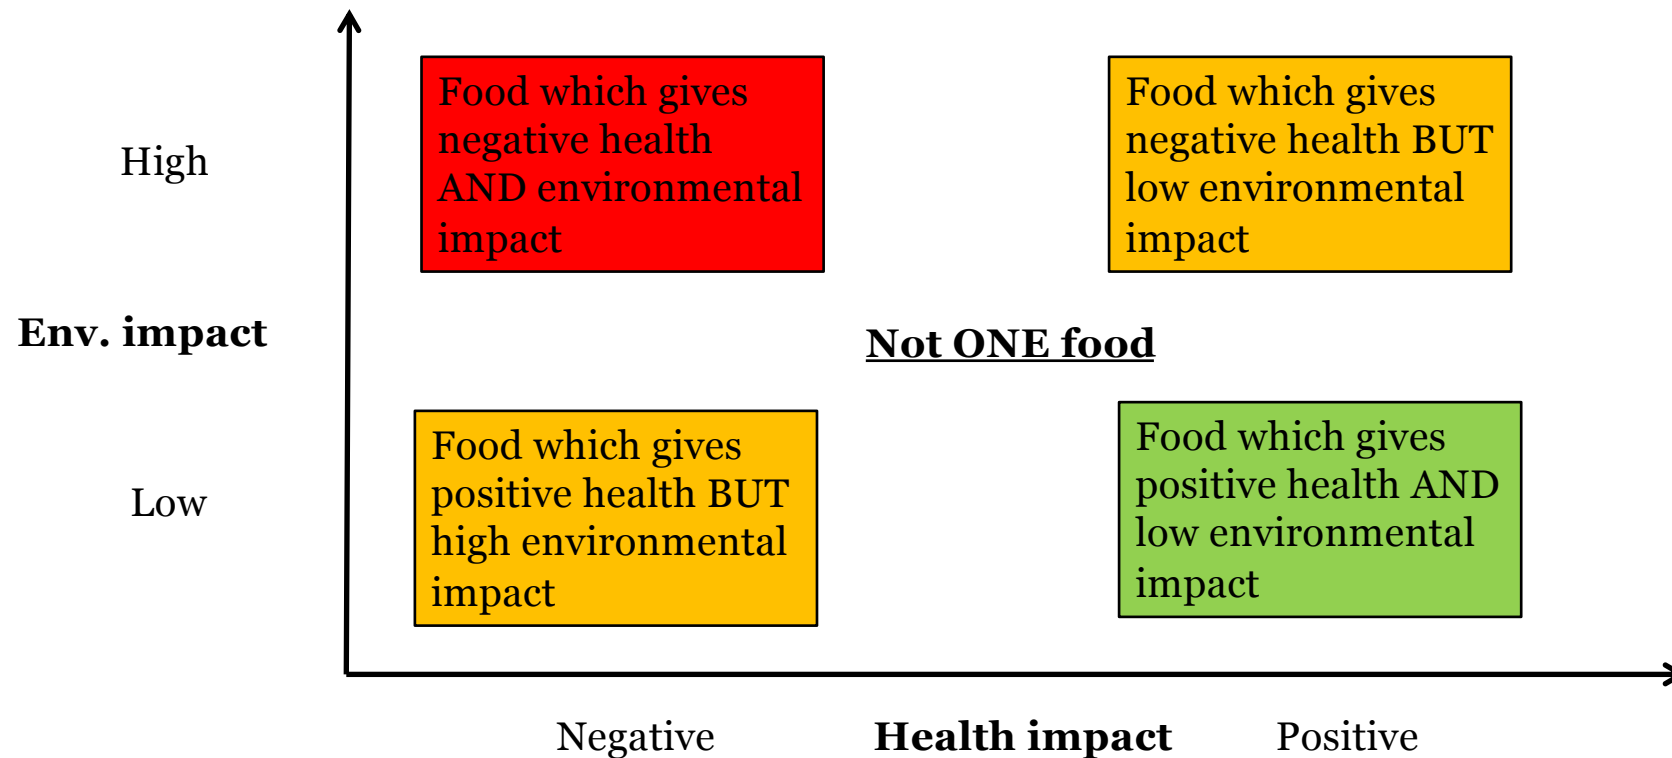

- 2 Cohorts
- 100 000 middle aged and seniors
- FFQs 1997 and 2009
- Mortality and Morbidity
- Urine samples for inflammation markers

- Lifecycle analysis
- Climate impact
- Land and water use
- Use of pesticides
- Exposure to PCB, heavy metals, etc..

Develop knowledge on the relationships between healthy diets/foods and environmental friendly diets/foods

1. Diet /Food consumption – Health Perspective
2. Diet /Food production – Environment Perspective
3. Improved environment-adapted diet – Combined Health and Environment Perspective

Mapping foods and diets according to health and sustainability

Nexus and seafood

Next Steps

- 37 species analyzed for GHGs and Nutrition Quality representative of Swedish fish consumption (Synthes project)
- Enter climate data in food consumption data in NEXUS cohorts
- Enlarge LCA dataset including a higher number of species (based on consumption data in the studied population), systems boundaries up to consumer, and finished and prepared products
- Analyse the associations between high/low seafood consumption, environmental impact, and health outcomes

Thank you!
